

Why Vascular Health Matters

Your vascular system has 60,000 miles of blood vessels—including arteries, veins, and tiny capillaries.

This affects every aspect of your health. Every organ and system in your body depends upon proper blood flow.

6 Reasons To Care for Your Arteries

- **More Youthful Appearance**
With proper blood flow, your skin, hair, and eyes will have better color and health.
- **Arterial Elasticity**
Hardened arteries are a threat to your heart, while increased elasticity is protective.
- **Greater Comfort**
Improved blood flow means warmer hands and feet.
- **Clearer Thinking**
Optimum brain function depends on proper blood flow.
- **Energy and Performance**
Improved nutrient delivery enhances cells' ability to make energy.
- **Sexual Vitality**
Blood flow is the key to lasting sexual health.

Proper blood flow is only possible with a healthy endothelial glycocalyx.

Ask your health care practitioner if Arterosil® is the right choice for you.

You're in control

Improve your blood flow by protecting your glycocalyx. You can protect and restore your glycocalyx with a healthy diet, regular exercise, and special nutrients.

The Protector

Your blood vessels are lined and protected by a structure called the endothelial glycocalyx.

Protect the Protector

Taking care of your endothelial glycocalyx is essential for your health. This slippery-smooth inner lining stops cholesterol from penetrating your artery walls—the first step in plaque development.

Arterosil is the only product clinically proven to protect and restore the endothelial glycocalyx.

Unhealthy Glycocalyx

Healthy Glycocalyx

Ask your health care practitioner if Arterosil® is the right choice for you.
